

XFCE HiDPI fix `everything too small`

June 8, 2015 | 0 Comments | Tags: technology, linux, UI, bugfix, XFCE, HiDPI, wedv, berichtsheft

[Mate Desktop](#) can do that right out of the box *and* features better UI/UX. Spare yourself the pain of XFCE - we gave up and used the HiDPI ready [Ubuntu Mate](#).

What you can achieve

XFCE in general

1. HiDPI theme:

<http://opendesktop.org/content/show.php/Pupi+%28Xfce+High+DPI+%2B+Retina+Theme%29?content=165525>

Firefox

1. **about:config:** layout.css.devPixelsPerPx
2. [Adjust default zoom level](#)

Thunderbird

1. **about:config:** layout.css.devPixelsPerPx
