Gnome: Remove title bar when maximized

Hide the useless titlebar when a window/application is maximized:[src]
1. Edit `metacity-theme-3.xml` :

    `sudo nano /usr/share/themes/Adwaita/metacity-1/metacity-theme-3.xml`

2. Press `CTRL` + `w` and type `frame` and press `ENTER` .

3. Your file may differ but see that the found section in your file matches the following snippet with regard to the highlighted values:

```
<frame_geometry name="max" has_title="false" title_scale="medium" parent="normal" rounded_top_left="false" rounded_top_right="false">
    <distance name="left_width" value="0" />
    <distance name="right_width" value="0" />
    <distance name="left_titlebar_edge" value="0"/>
    <distance name="right_titlebar_edge" value="0"/>
    <distance name="title_vertical_pad" value="0"/>
    <border name="title_border" left="0" right="0" top="0" bottom="0"/>
    <border name="button_border" left="0" right="0" top="0" bottom="0"/>
    <distance name="bottom_height" value="0" />
</frame_geometry>
```

- Ubuntu: Press `ALT` + `F2`,
  Fedora/Korora: Press `ALT` + `F2` and enter `r`, press `ENTER`.
